Do Not Sell My Personal Information Variation ID. Where to buy them Should they be NSF listed. And do I really need one. These are the questions that you ask yourself as a small or large business owner. I promise that it will take you 3 minutes to read this article and get all the answers. If you choose to purchase any of the products I have recommended, I may receive a commission at no cost to you. You can read my full disclosure at the bottom of the page. Do I need a commercial can opener. The rule of thumb is if you are opening more than 25 cans per day, and some of them are taller than 7 you should think about getting a commercial can opener because it will save you time and energy. There are three types of can openers suitable for commercial use manual, electric and crown punch. Which one is best for you depends on how many cans per day you need to open and how large those cans are. Read the basics about all can opener types manual, electric, crown punch in Can Opener Buying Guide. Heavy duty manual can openers are suitable for opening up to 50 cans per day 46 cans per minute and handle cans up to 11 tall. Similarly, electric can openers are able to open up to 50 cans per day, 4 7 cans per minute depending on the device model. Crown punch can openers are the best for heavy volume use. Who makes the best commercial can openers. Heavy duty manual can openers are made by Garde, Nemco, Vollrath, and Edlund. Edlund also makes commercial electric can openers and crown punch can openers. All heavy duty manual can openers are table mounted. They consist of a long bar 1325 that is inserted in the base that screws down to a tabletop.<http://www.gift-m.ru/userfiles/eurosport-home-gym-manual.xml>

A large handle on the top of the opener requires only a few turns to open the can. The can opener's blade assembly is usually simple to remove allowing you to clean it by hand or in the dishwasher, or replace the parts when they have worn out. All manual heavy duty can openers cut the can on the top with exception of the Nemco brand that makes some side cutting can openers. Garde and Edlund have a melonite arbor coating that prevents rust. Some Vollrath openers have an antibacterial coating on the blade to reduce bacterial growth between cleanings Edlund, Nemco are made in the USA. Warranty on manual commercial can openers ranges from 1 to 2 years. Check out manufacturers' instructions and warranty information in our Resources section. Should I get an NSF listed can opener. First of all, what is NSF. NSF National Sanitation Foundation International is an independent thirdparty certification body that tests and certifies products to verify they meet public health and safety standards. Why should you look to buy NSF certified or NSF listed commercial openers. Because your food inspectors and customers will love it. It ensures that your can opener meets food safety standards the product is constructed in a sanitary manner, and from food safe materials. In the NSF's own words "Choosing a product certified by NSF lets you know the company complies with strict standards and procedures imposed by NSF." Read more about NSF certification here . All Nemco and Vollrath heavy duty manual can openers are NSF listed. Where to buy a commercial can opener. Most of the openers sold by small vendors are available on Amazon. Other places to get a commercial can opener online are restaurant supply stores like KaTom Restaurant Supply, customer focused, great prices, Central Restaurant, Webstaurant, Hubert, a nd Kerekes Kitchen and Restaurant Supply. And now compare the best manual heavy duty can openers suitable for commercial application in the tables below.

A click on the image will take you to the KaTom Restaurant Supply store where you can purchase the featured can opener, a click on the button will bring you to the Amazon product page. Note that the faded out text in the tables shows what features are not available in the particular opener. If you have a big family and open dozens of cans per day, or open cans that are bigger than 7 inches, then a commercial can opener can save you time and energy. With a heavy duty can opener, you can handle up to 200 cans every day. There are generally two types of restaurant grade can openers, commercial electric can openers and the manual kind. We will be taking a look at both. What to Look for in a Commercial Can Opener Picking out the best heavy duty can opener for large cans is very different from picking a can opener for your home. Here are some things you should look for in a restaurant can opener. How Many Cans Do You Open To determine the best can opener for your needs, you need to have a rough idea of how many cans you open during an average day. If you open a lot of cans, then you will want to look for a manual opener. Electric models may make your prep work go quicker, but they are limited to about 50 cans in a day, whereas manual cans can handle

Any of these models will fit into your kitchen perfectly. Follow Written by The Review Guys Follow We discuss and provide feedback on anything and everything useful. Take that from someone who was dumb enough to hack at their black bean can with a paring knife in a moment of midmove desperation not so long ago. Or, they can be loaded with gimmicky bonus features. Unless you're using the same allmetal rotary opener that's been in the family for years, there's a good chance you've run through multiple devices that just keep breaking. To save you the money and frustration of another bad purchase, we chose 10 highly rated manual can openers and put them to the test opening every size can under the sun, evaluating for speed, comfort, durability, and safety, among other factors. It can outlive the competition without sacrificing speed or comfort. However, the OXO Good Grips Smooth Edge Can Opener available on Amazon outperformed all our can openers and is our favorite safety model, cutting through the side of cans to produce a smooth edge our only concern is some of the plastic construction may limit its longterm durability. Lefties will find joy in the Kuhn Rikon Auto Safety Lid Lifter available on Amazon, another safety model with an ambidextrous knob. Purchases you make through our links may earn us a commission. What it lacks in special features and flashy design it makes up for in pure power and rocksolid construction, making it our top choice for most people. Throughout our testing, the EZDUZIT easily pierced lids, stayed attached to the edges, and made its way around cans without catching or resisting along the way. Its slim rubberized handles were easy to grip and prevented hand fatigue when opening can after can. And with such an intuitive, straightforward design, there's little room for user error. While the EZDUZIT excelled in ease of use and speed trials, its durability is what pushed it ahead of the pack.

Its allmetal construction makes us confident that it will survive many years of daily use, including being jostled around in drawers and dropped off the counter, and its Amazon user reviews support our theory. You could probably drop this thing off a fourstory building without breaking it, but we wouldn't recommend it. In a world of flimsy plastic levers and dulling blades, the EZDUZIT is a steadfast companion that's in it for the long haul. The only drawbacks of the opener are that it produces sharp edged lids and is designed for righthanded people, but these are standard features of most traditional rotary openers. This ultrarubberized safety opener easily attaches to the top of cans with the help of a visual guideline to eliminate the guesswork of placement and glides around the edges with ease, producing a top that cleanly separates from the can's base like the lid of a jar. Although it moves more slowly than our ambidextrous safety pick from Kuhn Rikon, the OXO sits more comfortably in the hand and appears much less likely to break—where the Kuhn Rikon has a plastic button used to pinch the can's lid for final removal, the OXO's pinchers are built into the metal of the entire opener and are controlled by squeezing the handle. Using these pinchers isn't as intuitive as pressing a button, but we think the construction pays off in the long run. While this OXO took first place in our overall scoring, its plastic components and safety blade simply mean it won't work effectively for as long as the EZDUZIT or other allmetal traditional models. The Kuhn Rikon looks like and operates similarly to the OXO Good Grips Smooth, but the knob is situated on top of the opener, rather than the side. Even as a righthanded person, I really loved using the Kuhn Rikon

throughout testing. Its pushbutton control of small pinchers that lift can lids make it the fastest safety opener we tried, start to finish.

Unfortunately, that button is made of plastic, as is most of the Kuhn Rikon's handle and knob, which leads me to believe it won't survive as much use as our other top choices. Amazon reviews of the product are overwhelmingly positive, but some users note the limited shelf life on the "lid lifter" component. While I like to use fresh foods as often as possible in my home kitchen, you can't beat the price and convenience of canned goods. A crunchy tuna fish sandwich is one of my favorite lunches sorry, haters! and I've encountered some truly awful can openers in my pursuit of this meal, so I was excited to get to the bottom of which opener I should buy for my new apartment. Durability and ease of use were critical to me, but I took into consideration that comfort and safety are also top of the list for people with young children or trouble using their hands. I timed how long each opener took to open each can and took into consideration the ease and feel of the process as a whole. Did the opener stay attached to the can's edges. Did it resist being turned. Did it leave our hands sore. How messy or difficult was removing the lid at the end. Were its edges sharp or jagged. I suffered through smelling a combination of tuna fish and tomato sauce for weeks to get to the bottom of these questions. For example, traditional openers will last longer than safety openers because they must cut through a thinner piece of metal, and fixed openers will generally outlive rotary models due to their—as the name suggests—lack of moving parts. On the other hand, safety openers allow the blade to cut through the side of a can near the top, resulting in the smooth separation of the can into two pieces with flat, even edges. Because cans have thinner lids than sides, traditional openers have to do less work than their safety counterparts and are generally more efficient and durable.

Maybe your pet tries to get into your trash and lick cans clean, your child often helps you make dinner, or you just have health concerns about any potential nicks. We tested a variety of both traditional and safety can openers for this article so you can make the choice that's right for you and your family. So what's the catch. It's actually the same exact product as the EZDUZIT, down to markings on the central bolt, but costs twice as much. Both can openers are emblazoned with MADE IN USA on the knob in the same place, so it looks like this can opener's claim to fame isn't so special after all. In our testing, the Made in USA and EZDUZIT were basically indistinguishable. If the EZDUZIT sells out or isn't available in your area, this opener is the way to go—but it would be foolish to spend twice on the same product otherwise. It's comfortable to hold and easy to use, and it's OXO's number one seller—in addition to a fan favorite on Amazon. We're hesitant to give it top marks, however, because of the plastic piece that secures one of the gears to the handle. Unlike the allmetal EZDUZIT, this OXO isn't likely to stand the test of time. As a safety opener, it struggled slightly when cutting through the thick perimeter of the can, requiring more force than the OXO Good Grips Smooth Edge. It received bonus points for being ambidextrous and rather comfortable, but its plastic construction and odd design make it seem rather breakable. Overall, a middling performance by an interesting device. One Amazon reviewer claims to own a functioning P38 from 1944. Despite their unassuming stature, these WWII-era openers pack a punch, and can open just about any can with some practice and elbow grease. But "practice and elbow grease" aren't what most people are looking for in a household can opener. While it was fun to try the P51 and P38, they took three to four times as long to use as other manual openers and started to hurt my hand.

I also had trouble keeping the P38's blade propped up and away from its base. If you want something small to take hiking or to give as a gift to a handy friend, these openers are a great bet—but if you're just trying to open cans in your kitchen every day, you should probably stick to a device that won't hurt your thumb or get lost in your drawer. Its sleek, handlelike design and bright red coloring are a fun alternative to traditional American rotary openers in black and chrome. Even the packaging, which looks like it contains a retro bar of soap, caught our eye. Because it's another fixed opener, there is absolutely no plastic and zero moving parts anywhere on the device, meaning

it could last you decades. Unfortunately, the opener is just too difficult to use to be a good option for most people. It took us multiple attempts to figure out how you're supposed to move the opener and at what angle, it unhooked itself from the sides of cans on occasion, it splattered me with liquid from the cans, and it left my hand sore. It also requires some brute strength to use and has an extremely sharp, exposed blade that can leave jagged edges, making it unfriendly to children and people with disabilities. Buy this opener if you're skilled with your hands and want something cool to show your friends, but beware if you're concerned with safety and actual ease of use. Truth be told, we never successfully figured out how to attach the opener without just forcing it down onto the lid, puncturing its side with a safety blade. Although its allmetal construction suggests durability, the Super Kim let us down in most other areas. It forces you to grip the can with one hand while you attach and turn, which resulted in splatters and messy hands during testing. Tuna cans posed a particular challenge because of their stout shape, although larger cans caused less trouble.

Its white plastic exterior is unstylish, it's somewhat difficult to attach to cans, and it has two red plastic buttons that look likely to snap off in time. Although the Zyliss has a high average rating on Amazon, many recent reviews support our theory and point to how often it breaks or stops working. It also feels wrong dipping the head of the opener into the can's contents to pick up the lid, resulting in a dirty opener that needs cleaning. It will work in a pinch, but you'd be wise to invest in something else. She's produced in-depth reviews and guides on everything from meal kits to stand mixers and the right way to cook an egg. If you've found different results in your own research, email us and we'll compare notes. If it looks substantial, we'll gladly retest a product to try and reproduce these results. After all, peer reviews are a critical part of any scientific process. Purchases you make through our links may earn us a commission.
